Color Theory

Monochromatic Colors

Different shades, tints, and tones of the same color, which result in a sophisticated and cohesive palette.

Analogous Colors

Colors that are next to each other on the color wheel, such as blue, blue-green, and green. These create a harmonious and cohesive look.

Split-Complementary Colors

A base color and the two colors adjacent to its complementary color, providing contrast with less tension than direct complementary colors.

Complementary Colors

Colors that are opposite on the color wheel, such as blue and orange or red and green. These combinations create strong contrast and stand out.

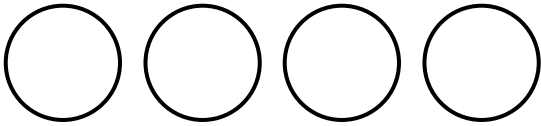

Triadic Colors

Three colors evenly spaced around the color wheel, like red, yellow, and blue. This scheme provides vibrant contrast while maintaining balance.
